## Abstract

*Keywords:* keyword1, keyword2, keyword3

*In this paper there are examples of all the useful things you can do with  $\text{\LaTeX}$ . This document includes settings and examples for using the following packages: amsthm, appendix, array, booktabs, cancel, ccicons, comment, empheq, endnotes, enumitem, float, graphicx, indentfirst, lastpage, lipsum, listings, makeidx, mathtools, multicol, multirow, palatino, paracol, setspace, standalone, tabulararray, tabularx, verbatim, wrapfig, hyperref, geometry, xolor, tcolorbox, textpos, tikz, tkz-euclide, titlesec, eucal, mathdesign, inconsolata.*

## 1 Introduction

This paper is a template for writing  $\text{\LaTeX}$  papers for MassBay Consulting, LLC and other audiences.

---

\*The author wishes to thank poop.

†The authors also wish to thank their families.

In this paper there are examples of all the useful things you can do with  $\text{\LaTeX}$ . This document includes settings and examples for using the following packages: amsthm, appendix, array, booktabs, cancel, ccicons, comment, empheq, endnotes, enumitem, float, graphicx, indentfirst, lastpage, lipsum, listings, makeidx, mathtools, multicol, multirow, palatino, paracol, setspace, standalone, tabulararray, tabularx, verbatim, wrapfig, hyperref, geometry, xolor, tcolorbox, textpos, tikz, tkz-euclide, titlesec, eucal, mathdesign, inconsolata.

### 1.1 The quick brown fox

The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown

fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog.

## 2 This Section

In section 2 there are examples of the various types of lists<sup>1</sup>:

**Item 1 header** This is item one...The quick brown fox jumps over the lazy dog.

**Item 2 header** This is item two...The quick brown fox jumps over the lazy dog.

**Item 3 header** This is item three...The quick brown fox jumps over the lazy dog.

1) **Item 1 header** — This is item one...The quick brown fox jumps over the lazy dog.

2) **Item 2 header** — This is item two...The quick brown fox jumps over the lazy dog.

3) **Item 3 header** — This is item three...The quick brown fox jumps over the lazy dog.

► **Item 1 header** — This is item one...The quick brown fox jumps over the lazy dog.

► **Item 2 header** — This is item two...The quick brown fox jumps over the lazy dog.

► **Item 3 header** — This is item three...The quick

brown fox jumps over the lazy dog.

## 3 The Other Section

In section 3 there are examples of mathematics:

$$y = mx + b \quad \text{Linear} \quad (3.1)$$

$$f(x) = \int_{-\infty}^{+\infty} e^{i\theta} d\theta \quad \text{Integral} \quad (3.2)$$

$$z = 2^k - \binom{k}{1} 2^{k-1} + \binom{k}{2} 2^{k-2} \quad \text{Binomial} \quad (3.3)$$

## 4 The Code Section

```

1 # 34567890123456789012345678901234567890123456789012345678901234567890
2 #!/usr/local/env python3
3 def gcd(m, n):
4     """Return_GCD_of_m_and_n...GCD_is_defined_for_all_integers."""
5     return abs(m) if n == 0 else gcd(n, m % n) # abs allows any integer
6
7 # https://en.wikipedia.org/wiki/Least_common_multiple
8 def lcm(m, n):
9     """Return_LCM_of_m_and_n...LCM_is_defined_for_all_integers."""
10    return 0 if m * n == 0 else abs(m // gcd(m, n) * n) # abs allows any integer

```
